

# SmartMeet™ Voice over IP (VoIP)

## Quick Start Guide

Open the door to a more reliable and affordable audio solution with SmartMeet integrated with Reservationless-Plus® Voice over IP (VoIP).

With SmartMeet Voice over IP you can:

- Start and join your meetings from countries where no dial-in number is available.
- Enable VoIP and traditional telephone users' access to your meetings by utilising a hybrid audio platform.
- Connect to your meetings when only a Wi-Fi connection is available.
- Save plan minutes and avoid roaming charges while travelling.
- Avoid costly data overages by enabling Voice over IP to be used only with a Wi-Fi connection.
- Experience faster connectivity.
- Meet with simultaneous audio and web connections with mobile networks that do not support this feature.

When starting a meeting with VoIP, it must first be authorised by your organisation to be provisioned and enabled in our system. In addition, to ensure VoIP is available in your country, you must enable the location-based feature.

### Start a Meeting with Voice over IP\*

1. On the Home screen, tap **Start Meeting**.
2. Choose **Use Voice over IP**.
3. Tap **Connect Now**.

### Join a Meeting with Voice over IP\*

1. On the Home screen, tap **Join Meeting**.
2. Choose **Use Voice over IP**.
3. Tap **Connect Now**.

*\*Voice over IP currently available for iOS / coming soon for Android.*
